The Situation

FileNet users who want to view TIFF images on the web have a problem: TIFF images are not natively supported in web browsers. In addition, many companies have no-application-install policies for security reasons and to comply with licensing contracts. A user wanting to simply view a FileNet image may need to call the system administrator or submit a help desk ticket to install the viewer software. These delays cost productivity.

FileNet currently offers three methods to retrieve documents. The first two methods require an application download to every local machine. The Java Viewer is a 500 KB Applet download + 8MB JRE download and the IDM Viewer is 20 MB. Both are installation headaches. The 'Open' option allows you to save the image locally, but without a viewer application you will have no way to see the image.

	No application download required	View TIFF Images	Navigation controls for image documents	Pure .NET ASPX	Pure J2EE JSP
thinView	X	X	X	X	X
Java View		X	X		
IDM View		X	X		
Open	X				

This is the real power of thinView—a TIFF image viewer with no software downloads, no hassles, no problems.

Product Overview

thinView solves the client download problem by displaying images in a native web browser format. Simply click on the document you want to see and thinView displays the images with all of the basic viewer functionality. With thinView, there is no software to install on the local machine. Users view the images seamlessly and without delay.

thinView is easy to maintain. Since thinView is server-based, version updates are a snap. There is no client software, therefore the update is single-sourced and everyone in your organization is on the same page. You will never again have to worry about image viewer operating system conflicts on your desktop.

Zero download web viewer

Key Features

- thinView is a TIFF image viewer with no software downloads.
- thinView runs in harmony with FileNet software.
- thinView was designed from the ground up as a web application that supports both .NET and J2EE web servers.
- thinView eliminates costly security authorizations.
